

## HEUTE-Guarantee

### HEUTE never sleeps

From the very first moment when you consider buying a HEUTE product, our team will be ready to help. You can contact us from 7:30 a.m. to 5 p.m. (Monday to Thursday) and Fridays from 7:30 a.m. to 4 p.m. via telephone. You can contact us 24/7 by fax or email.

### Nowhere is too far for us

Apart from the standard units, which you can find in our catalogues, we can provide you with sole cleaning units and special facilities for industrial purposes that suit your needs and local demands. In order to offer tailor-made solutions, we will visit your company and help you make the right decision.

### Fast as lightening

Having chosen your desired machine from our catalogue/website, send us your order and we shall be able to dispatch most of our models the very same day we receive your order.

Machines with a special coating or special equipment usually take 8 to 10 days. For sole cleaning units and industrial facilities, we will coordinate a date according to the phase of your project.

### We care for you

When you are using our products, our work is not yet finished. Our shoe shine machines have an exceptionally long guarantee period of 3 years. During this period, we replace all spare parts at no charge, which are damaged because of faults we have made during production and assembling. Damage due to improper handling will invalidate the guarantee.

For 20 years from the date of purchase we will provide spare parts for the maintenance of your shoe shine machine!

All our products have a long lifetime expectancy on the condition that they are handled properly. However, should you need a spare part, we will normally be able to send it to you on the very same day.

All our products come with a detailed operating manual; if you wish, we can even provide the spare part lists and exploded drawings

Please keep in mind that the colors shown in this catalogue may differ from original colors.

## History

The company HEUTE was founded in 1905. In 1945, the first hotel shoe shine machine was built and it went into series production soon after. Today, the production range is very broad ranging from a practical smaller shoe shine machine for domestic use up to exclusive models for hotels. In addition, HEUTE has provided for several decades sole cleaning units, as well as large scale units for different industrial purposes.

The family company with a tradition of more than 100 years is expanding throughout the world and set itself to produce highest quality machines individually and according to our customer's requirements.

HEUTE shoe shine machines are renowned in Germany and abroad and they are being exported worldwide.

**Our in-house production enables us to meet almost any customer requirement and we look forward to realizing the design suggestion for your shoe shine machine.**

## Our quality in detail.

**"We never wanted to be the biggest but the best."**

This is the maxim of August Heute, and ever since its foundation in 1905, the company has remained true to this principle from generation to generation. "HEUTE" started as a producer of shoemaking machines. In 1950, production shifted towards shoe shining machines and similar products like cleaning devices for soles and skids.

Whatever we do, we do it with passion for our product.

### Design

Our machines are being developed in cooperation with selected designers. Thus, a high degree of usefulness and a timeless design are guaranteed. Your lasting satisfaction and convenience with our product is what we strive for.

### Engineering

Many years of experience, particularly with industrial machines, guarantee perfect functionality combined with high durability. HEUTE machines have powerful motors and heavy cases. This leads to durability and a foothold for the machine while at the same time providing trouble-free usage.

### Polish dispenser

The shoe polish is applied gently through a special stainless steel valve with a large ball. A stop inside the valve prevents the shoes from being damaged by any rough edges while applying the polish.

### Brushes

Our polishing brushes made from wool yarn have a wooden core and they provide perfect care for high gloss leather. The wool yarn mixture takes up the polish and spreads it evenly across the shoe. Our pre-cleaning horse-hair brushes will cleanse rough dirt from the shoes. Artificial material like nylon is not used for our brushes as it may damage the surface of the shoe too easily. Our brushes give a perfect and safe polish to the shoe.

### Case

The metal-processing of the machine cases is a traditional skill, which has been refined for many decades now – be it stainless steel processing or the cast-iron moulding of the aluminum cases. We vouch for long life cycles of our products – spanning generations.

### Guarantee

We guarantee a 20-year spare part provision to our customers and thus grant lasting support even in the distant future. Due to the considerably long life cycles of our machines, it is well worth buying a spare part even after decades.

stainless steel  
brushed

every RAL-Color

This shoe shine machine with its classic column design will be an eye-catcher in every modern ambience.

Whether the model **Ellipse** will be installed to the wall, in a corner or standing freely in the room, it offers a most comfortable kind of shoe cleaning to the user. The brushed-off dirt falls onto a rubber mat, which is loosely placed into the machine base.

▲ High-quality stainless steel surface

▲ Ellipse RAL with polish dispenser

The model **Quadro** continues the design line of the classic column shape of the Polifix 3 Ellipse. The cornered body out of stainless steel has a brushed surface with rounded corners. It can be delivered with three brushes, but without polish dispenser, or with two brushes and polish dispenser. If requested, the body can also be provided in every RAL color to match the ambience (at no additional charge).

The pre-cleaning brush in the middle removes coarse dirt. The brushed-off dirt is falling onto a rubber mat, which is removable. The polishing brushes ensure the shining of the shoes. The elegant shoe shine machine can be fitted into every entrance area of high value and its service should please every user.

**Case:**  
stainless steel brushed

◀ Cosmo, claret

## Cosmo

The highly attractive and modern case of the **Cosmo** model range is made from cast aluminum. The 8 mm thickness of the case makes it very stable. The cases are deliverable in many standard colors. If requested, we are also able to coat the case in a custom color.

The Cosmo is equipped with an on/off switch, which is located at the base plate. The user switches the machine on by means of a kick onto the switch and switches it off by means of a second kick on the contact switch. This model fits perfectly into the sophisticated household where functionality and aesthetics are in high demand.

## Cosmo plus

**Dimension:**  
60 cm x 42 cm x 95 cm

(110 volt optionally),  
130 watt,  
1200 rpm

The Cosmo plus model is equipped with a bar of highly polished stainless steel with an additional ergonomic handle. The bar offers the user a safe grip while cleaning the shoes. Thus, the user can avoid touching any wall behind the machine!

The user starts the machine by means of the handle and the machine stops automatically as soon as the user removes his hand from the handle. This model is designed for offices and smaller hotels which offer both: a special service and a special design.

▲ Cosmo plus, graphite

▲ Comfortable switch

▲ Attractive, curved design in silver

HEUTE's latest model **Elégance Couleur** unites functionality with a stylish, perfectly formed design and thereby easily integrates into the modern ambience of small hotels, pensions or offices.

Durable horsehair precleaning brushes complement smooth wool yarn polishing brushes and provide an unrivaled gentle and perfect shoeshine service.

Design

**Elégance Couleur plus**

The sheet-steel model **Elégance Couleur plus** is an eye-catcher in the catering business as well as any office due to its new design with elegantly smooth shapes.

The machine's height guar-  
antees a safe hold during the  
shoe care process. A handy  
timer, a honeycombed rubber  
mat with integrated sole  
wipers, a polish dispenser,  
the powerful but smoothly  
running motor and the  
approved combination of  
robust horsehair brushes  
for precleaning and smooth  
wool yarn polishing brushes  
complete the equipping.

## Polifix 2

The **Polifix 2** is a heavy machine and very popular as a model for floors in office buildings.

The user determines how long the three wide brushes will run by means of the contact switch, which is placed on the bar.

This strong model is equipped with a removable rubber mat and sole wipers.

The version Chrome is very elegant and fits in very well into every environment.

The lacquered version is a bit more quiet and down-to-earth.

## Polifix 3

The **Polifix 3** is the most famous and varied shoe shine machine for hotel- and office use. This space saving model, which can be placed adjacent to the wall, is equipped with a removable rubber mat, sole wipers and a lockable door.

The Polifix 3 family can easily be adapted to its environment as the lockable front door is available in different colors. We will be glad to assist you in choosing a color matching a color sample of the environment you want the machine to fit in to.

The **Polifix 4 Super** distinguishes itself with a very solid design. In addition to a wide pre-cleaning brush there are three polishing brushes and a removable honeycombed rubber mat with sole wipers. This model represents luxury irrespective of whether you choose matt black doors with a brass framework, a wooden decor or a stainless steel finish.

## Politec Solar

**Politec Solar** was developed particularly for entrance areas. This model has its polish dispenser placed in the middle of the machine between the very wide brushes.

In addition, the machine can be mounted to a wall. For indoor use we recommend **Politec Solar**. For outdoor mounting please choose the model **Politec Polar** as it is weatherproof and frost resistant - dirt will stay outside this way. Politec Polar does not have a polish dispenser as leather polish is not frost resistant. An ergonomic bow handle is fixed to the machine and provides a safe hold. The honeycombed rubber mat underneath the brushes is removable and has sole wipers.

ergonomic handle

The cleaning system of the compact sole cleaning unit **Solamat 90** is designed with four brushes, which are counter rotating that clean the soles from underneath and two lateral rotating disk brushes that clean the edges of the soles. The brushed-off dirt falls into a large drawer, which is designed to collect the dirt and which is located under the brushes. This drawer can be cleaned easily. The ergonomic handle bow offers a safe hold to the user while cleaning his soles.

The sole cleaning machines **Solamat 100** and **200** are designed for industrial purposes. Four wheel brushes clean the soles and two additional lateral disk brushes clean the edges of the shoes. The uppers are cleaned by a third brush. The brushed-off dirt falls into a large drawer, which is placed underneath the brushes - it can be cleaned easily. The belt gear ensures powerful brushing while running smoothly at the same time.

In addition, the **Solamat 200** is equipped with an exhaust and filtering system, which is placed inside the upper part of the case. Dust and aerosols are sucked into the upper part of the case by means of under-inflation and they are collected by a filter. The cleaned air exits via a grid at the rear side of the case; the filter mat can be exchanged easily.

## Solamat 200

**Drive:**  
belt drive and strong motor

**Colors:**  
graphite or agate-grey

**Dimension:**  
46cm x 60cm x 110cm  
*width x depth x height*

**Weight:**  
66 kg net, 70 kg gross

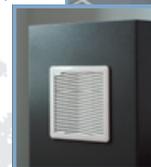

**Bristles:**  
wheel and disk plate: nylon  
upper brush: horsehair  
(optionally: nylon - at no additional cost)

**Timer:**  
1 minute

**Power supply:**  
230 volt (110 volt optionally),  
240 watt,  
750 rpm (for brush gear)

**Exhaust volume:**  
360 m<sup>3</sup>/h (with filter mat 500g/m<sup>2</sup>)

**Filter classes:**  
according to DIN 24185 - EU 4  
according to EN 779 - G 4

▲ Exhaust and filtering system

graphite  
(RAL 7022)

agate-grey  
(RAL 7038)

## Solamat 100

**Drive:**

## Neptun I

**Case:**  
stainless steel design

**Dimension:**  
65 cm x 106 cm x 120 cm  
*width x depth x height*

**Water consumption:**  
approx. 5 liters per minute

**Feeding pump:**  
adjustable from approx.  
0.01 to 0.5 l/min

**Weight:**  
80 kg net, 90 kg gross

**Contact switch:**  
on the handle

**Power supply:**  
400 volt, 16 A, other voltages  
optionally, three-phase current

stainless  
steel

A comfortable handle switch starts the robust **Neptun I** sole-cleaning unit. On startup, a magnetic valve will provide the water supply. By means of an adjustable feeding pump, a cleaning or disinfectant medium can be mixed with the water.

The **Neptun II** boot-washing unit is similar to the **Neptun I** sole cleaning unit, but is also equipped with two nylon brushes, which are placed at both sides. These wheel brushes, which are also sprayed with water and cleaning medium, clean the bootlegs effortlessly and quickly.

## Neptun II

**Case:**  
stainless steel design

**Dimension:**  
112 cm x 95 cm x 131 cm  
*width x depth x height*

**Water consumption:**  
approx. 6 liters per minute

**Feeding pump:**  
adjustable from approx.  
0.01 to 0.5 l/min

**Weight:**  
138 kg net,  
150 kg gross

**Contact switch:**  
on the handle

**Power supply:**  
400 volt, 16 A,  
other voltages optionally,  
three-phase current

stainless  
steel

**Solamatic II** and **III** brush dirt from the soles, while the user is passing through the unit. Because the machine is built like a gateway, everyone has to pass through it, enabling dirt to be cleaned effectively from the shoes and not be taken into or out of production areas.

**Solamatic II** uses dry cleaning with a dirt collector underneath the brushes. The unit can be installed at or above ground level. For detailed information, please refer to our catalogue: "Sole Cleaning and Washing Units for industrial purposes".

## Solamatic II

**Cleaning technique:**  
*Solamatic II:* dry cleaning with counterrotating brushes, large dirt collecting unit  
*Solamatic III:* wet cleaning with counterrotating brushes, bin for cleaning medium

**Equipment:**  
automatic start by means of a light barrier,  
automatic switchoff, 2 emergency stops, entrance  
from both sides.

**Dimension:**  
100 cm x 250 cm  
*width x length*

**Installation/mounting depth:**  
approx. 16 cm  
*height of the path without railing*

**Weight:**  
640 kg

**Power supply:**  
400 volt, other voltages optionally  
three-phase current

stainless  
steel

Combination: stainless steel  
+ any RAL color for the railing

## Solamatic III

The sole cleaning unit **Solamatic III** makes use of cleaning media with its brushes moving through a bin containing the medium. An optional feed pump controls and dispenses the cleaning medium.

### Clean soles by means of active cleaning.

Until now, attractive entrance areas and offices of high value are exposed to excessive wear-and-tear from high usage, which leads to premature wear-out.

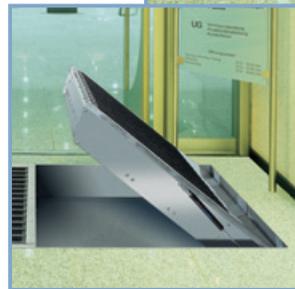

The resulting costs for cleaning, maintenance and renewal can be reduced considerably by using the active sole cleaning unit, **CleanGate®**. This way, dirtying carpets or floors by visitors and employees can be avoided.

The visual appearance of the **CleanGate®** is similar to a conventional doormat that is installed in the floor. However, the efficiency of bristles working in opposite directions is much higher than that of conventional mats. We have produced similar units for large scale industries for many years now, where moving brushes or mats reliably prevent staining and scratching of adjacent floor covering.

**CleanGate®** is particularly suitable for those areas where many people are passing by – e.g. shopping centers, airports, administration buildings or offices. Visitors, customers and guests will have their soles cleaned automatically when crossing the unit. The patented bristle drive with bars moving in opposite directions is guaranteed to work, despite the amount of dirt that is brushed off.

For detailed information please refer to our catalogue: "**CleanGate®**".

CleanGate®

Cleaning is made easy due to gas struts which open the gate effortlessly.

**Pit Dimension:**  
143 cm x 120 cm x 32 cm  
width x length x depth

**Max. loading capacity:**  
300 kg concentrated load,  
unlimited number of people

**Cleaning area:**  
98 cm x 108 cm  
width x length

**Net-Weight:**  
300 kg

**Brush bars:**  
approx. 280 movements / min

**Power supply:**  
400 volt, 16 A,  
other voltages optionally,  
three-phase current

stainless  
steel

The case, made from stainless steel, fits in easily to modern architecture.

Fixed stripes made from felt absorb dampness of the soles.

The entire unit is free of maintenance as the drives are dirt-protected.

Anti-skidding stainless steel grates allow trolleys as well as shopping cards or wheelchairs.

## GaloMat®

**GaloMat®** is a shrink-wrapping machine for shoe soles. It was developed in order to substitute hospital booties for something easier to put on in areas like hospitals, clean room facilities, laboratories or food industry.

**GaloMat®** shrink wraps fully recyclable PVC film within 7 seconds

around the user's shoe soles. The PVC film sits tight and is extremely durable, providing a long operating life expectancy. During the shrink-wrapping process, the user can easily prop himself up on the attached retaining bracket.

For detailed information and examples of application, please refer to our catalogue:

**"GaloMat®"**. This catalogue also provides additional information on **GaloTec** (see below).

▲ Shrink wrapping process

▲ Final result

**Nominated for  
ISSA/INTERCLEAN  
Innovation Award 2006**

## GaloTec

**Power supply:**  
230 volt (110 volt optionally) / 2.000 kW  
three-phase current

**Weight:**  
approx. 44 kg

**Dimension:**  
approx. 48 x 83 x 150 cm  
*width x depth x height*

**Marks of conformity:**  
GS (TÜV), CE-LVD (VDE),  
CE-MD, CCC, EMC

**GaloTec** is an ideal addition to **GaloMat®** because this recycling box presses used PVC booties into recyclable briquettes.

## Mistral 2

**Power supply:**

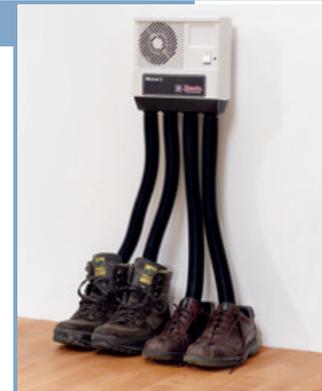

230 volt  
(110 volt optionally),  
300 watt,  
three-phase current

**Dimension:**  
24 cm x 12 cm x 23 cm  
*width x depth x height*

**Length of the tubes:**  
54 cm

**Weight:**  
2 kg net, 2 kg gross

**Air temperature at exit:**  
approx. 40 °C / 104 °F

The **Mistral 2** shoe and boots dryer is designed for private use. The equipment is mounted to the wall, so that the tubes for hot air hang approx. 5 cm above the ground. Users can dry or pre-heat their shoes and boots by inserting the tubes into the shoes. The desired drying time can be adjusted by means of a timer (0-120 min).

## Mistral 10/15

drying systems are

produced for professional purposes with very high quality. Shoes, boots and gloves are dried very softly by solid and maintenance-free motors, blowing hot air for a predefined amount of time.

Drying time will be approximately 1-2 hours at ambient temperature of 25 °C / 77 °F.

## Mistral 10/15

**Power supply:**

230 volt  
(110 volt optionally),  
500 watt,  
three-phase current

**Dimension:**  
*Mistral 10 (for 10 Pairs):*  
55 cm x 35 cm x 153 cm  
*width x depth x height*  
*Mistral 15 (for 15 Pairs):*  
84 cm x 35 cm x 153 cm  
*width x depth x height*

**Weight:**  
*Mistral 10:* 25 kg net,  
31 kg gross  
*Mistral 15:* 35 kg net,  
41 kg gross

This lockable, two door drying cabinet was designed particularly for working clothes, which require a long drying time.

The air is warmed by a heater and blown into the internal cabinet.

The table with the wet clothes turns slowly so that the clothes are dried quickly and softly.

## Mistral 18

**Power supply:**

230 volt  
(110 volt optionally),  
1,2 kW,  
three-phase current

**Design:**  
sheet-steel,  
powder coated

**Hooks:**  
18 pieces

**Dimension:**  
75 cm x 78 cm x 204 cm  
*width x depth x height*

**Weight:**  
130 kg

**Timer:**  
adjustable up to 24 h

## Solamatic III "Henkel"

### Special cleaning for casters

This unit cleans casters of transport vehicles. A transport line automatically pulls the vehicles through the cleaning-system at a constant speed. In the front, brushes and liquid clean the casters - in the rear, the running surfaces and flanks of the tires are disinfected.

Henkel

## Cleaning gates: accessible afoot or passable

HEUTE not only produces accessible cleaning gates but also passable units, depending on the operating range. Our gates can avoid forklift trucks or other vehicles from transporting dirt from their tires or rolls into or out of a production area. Before entering a sensitive area, each vehicle must pass the cleaning gate, which is fixed into the ground.

DAIMLERCHRYSLER

## Skid cleaning units

To avoid impurities in the coating area and to ensure higher transportation speeds, HEUTE Skid Cleaning Systems are integrated into the conveyor system. The skids are cleaned with a combination of brushes of different bristles from below and from both sides. Cleaning-liquids support and speed up the cleaning - a dispenser is responsible for the supply.

## Neptun I Version "Automobilbau"

### Special version for e.g. DaimlerChrysler coating cabins

This sole-cleaning equipment is inserted into the grates of coating-systems and cleans the workers' soles from wax, filler and car paint.

Due to its explosion-proof construction, this unit can be used in cabins. It prevents slipping and the distribution of dirt out of the cabin.

## Glove cleaning equipment

With this cleaning equipment, the workers can clean their gloves at regular intervals. The cleaning can be done with the gloves on, which facilitates handling and eliminates time-loss. The user starts the brush-unit with a pedal. The brush-unit itself is moved through a cleaning medium. The degree of cleansing can be supervised through a cover. The cleaning-liquid will be supplied to the cleaning-ump automatically. The machine is drivable, so that it can be moved to a suitable place, where the waste-water-tank can be emptied.

## Service

To most people, shoe shine machines are known as silent servants from their visits in hotels. But then why would only the hotel manager want to reduce transportation of dirt and why would only this business want to provide a clean and shiny environment?

Service becomes more and more important and a perfect shoe shine machine will make your customer realize he is getting that "certain something" when doing business with you.

We provide shoe shine machines with your individual design or company logo that can help you present your business as "perfectly clean".

We will be glad to work out an offer meeting your demands.

If you want to know more about the possibilities of an individual design, please take a look at our special catalogue: "Shoe shine machines for attractive customer service". This catalogue can be ordered via our service hotline.

Quadro with TFT

## Care products

### Special leather polish for shoe shine machines

Available in colorless/neutral or black; 1 liter disposable bottle. The shoes will be impregnated by the dubbin and kept smooth, the wool yarn polishing leads to a natural shining. We recommend using colorless media to be able to polish shoes of every color.

### Special cleaning medium HEUfex

HEUfex is a nonfat medium for cleaning or degreasing shoe shine brushes and bristles; available in 1 liter disposable bottles.

## Further information

More detailed and specific information can be obtained via fax, phone or internet.

### CleanGate®

Clean soles by means of active cleaning. The automatic cleaning mat for entrance areas.

### GaloMat® + GaloTec

The shrink-wrapping machine for hospitals, clean room facilities, laboratories or swimming pools.
